

THEORETICAL DISCHARGE THROUGH CIRCULAR ORIFICES
U.S. Gallons (231 cu. in.) per Minute

The amount of water (gpm) flowed is determined by the following formula:

$$GPM = 29.83 C d \sqrt{p}$$

C = nozzle or outlet coefficient **d** = accurate diameter of the outlet in inches
p = pressure recorded on the pitot tube

Head Lb.Sq.In.	Velocity Discharge Ft. per Sec.	Diameter Orifice (Inches)
